About Corcept Therapeutics Incorporated

Corcept is engaged in the discovery and development of drugs that treat severe metabolic, oncologic and psychiatric disorders by modulating the effects of the stress hormone cortisol. The company's product, Korlym[®], was the first FDA-approved treatment for patients with Cushing's syndrome. Korlym inhibits the effects of excess cortisol by modulating activity at the glucocorticoid receptor, one of the two receptors to which cortisol binds. Corcept has discovered a large portfolio of proprietary compounds that selectively modulate the effects of cortisol but not progesterone. It owns extensive United States and foreign intellectual property covering the composition of these selective cortisol modulators and the use of cortisol modulators, including Korlym, to treat a wide variety of serious disorders.
